

Project Design Phase-1

Solution Fit

DATE	16 October 2022
TEAM ID	PNT2022TMID12298
PROJECT NAME	Real-Time River Water Monitoring and Control System

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) <small>Who is your customer? i.e. working parents of 0-5 y.o. kids</small> CS	6. CUSTOMER CONSTRAINTS <small>What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices</small> CC	5. AVAILABLE SOLUTIONS <small>Which solutions are available to the customers when they face the problem? or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking</small> AS	Explore AS, differentiate
	<p>People living in rural areas near to the river ,who uses river water</p>	<p>Water quality monitoring system is used for identify the water pollution on specific area. People may find it hard to recover if any fault occurs,this system prevent people from water pollution.</p>	<p>Individual notification to each people could be sent,it is not possible . this system will still notify the corporation and they can further notify the people to aware.</p>	

Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS <small>Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.</small> J&P	9. PROBLEM ROOT CAUSE <small>What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations.</small> RC	7. BEHAVIOUR <small>What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)</small> BE	Focus on J&P, tap into BE, understand RC
	<p>The river water quality monitoring system that checks periodically ,the dust particles,temperature and PH level and gave notifies for the public when the water quality varies</p>	<p>We know that the sensor are expensive and the system needs more than one sensors to work,these sensors are used periodically to check the quality of water and if any problem, need to be replace frequently.</p>	<p>The customer could use the user guide provided to overcame the problem or else they can report and contact the corporation. They will take care of the problem.</p>
